

**Dear Hiring Team,**

I am excited to apply for the Full-Stack Engineer (TypeScript) position. With over five years of experience in backend and full-stack development, I specialize in building scalable SaaS platforms, APIs, and microservices using TypeScript, React, Node.js, and PostgreSQL. My background aligns closely with your mission to deliver robust and user-focused digital solutions.

At Remind.me GmbH, I engineered Symfony modules that improved system performance by 20% and introduced monitoring with Sentry and Grafana to increase reliability. At Coeus Solutions, I migrated legacy monoliths into Symfony-based microservices, cutting response times by 30% with optimized SQL and Redis caching. I have also taken ownership of full lifecycle delivery—for example, developing a Laravel Shopify upsell app from scratch with GitLab CI/CD automation and Docker deployment, ensuring faster and more reliable releases.

What excites me most about this role is the opportunity to contribute across the stack in a modern TypeScript environment while collaborating in a team focused on impact and scalability. I am confident my mix of backend depth and full-stack versatility will bring strong value to your engineering team.

Thank you for considering my application. I would be glad to discuss how I can contribute to your success and am available to relocate or work remotely as needed.

**Sincerely,**

Farhan Shakoor
